Problem Set 5
CPSC 689 Randomized Algorithms
Andreas Klappenecker

The assignment is due next Monday, Nov 14, before class.

- The term paper must be written in LaTeX using the IEEEtran.cls style
  http://www.ctan.org/tex-archive/macros/latex/contrib/IEEEtran/
  You can find an introduction to LaTeX at
  ftp://ctan.tug.org/tex-archive/info/lshort/english/lshort.pdf

- Start writing the paper in LaTeX. It should contain the tentative title
  of your project, the author names, and a description of your problem
  (at the very least, you should give an indication of what directions you
  are going to explore).

- Start working on the related work section. If n is the number of mem-
  bers of your team, then you should write short summaries of *at least* $2n$
  papers that are related to your project . The summaries can be short.
  The main point is that you should very carefully read some key papers
  that get you started with your project. You do not need to spend much
  time on writing the summaries, as you need to focus on writing parts
  of your term paper.
