Contents

1	**Introduction**		**1**
1.1	Reliability Assurance		1
1.2	Planning and Design		1
1.3	Techniques and Applications		3
1.4	Scope of the Book		3
2	**Reliability Mathematics**		**5**
2.1	Introduction		5
2.2	Set Theory		5
	2.2.1	Union of Sets	5
	2.2.2	Intersection of Sets	6
	2.2.3	Basic Laws of Boolean Algebra	7
2.3	Probability Theory		8
2.4	Random Variables		9
	2.4.1	Discrete Random Variables	9
	2.4.2	Continuous Random Variables	11
2.5	Expected Value and Variance of the Random Variables		16
2.6	Moment-Generating Function		16
2.7	Hazard Plotting for Incomplete Failure Data		17
	2.7.1	Hazard Rate Plotting Theory	17
	2.7.2	Hazard Plotting for the Weibull Distribution	18
2.8	Laplace Transforms		19
	2.8.1	Laplace Theorem of Derivations	19
	28.2.	Laplace Transform Initial-Value Theorem	20
	2.8.3	Laplace Transform Final-Value Theorem	20

2.9 Partial Fraction Technique 20
2.10 Differential Equations 21
2.10.1 Differential Equation Solution with Laplace Transform Technique 22
2.10.2 System of Linear First-Order Differential Equations 23
2.11 References 24

3 Fundamental Concepts in Reliability Engineering 25

3.1 Introduction 25
3.2 General Reliability Function 25
3.2.1 General Concepts 25
3.2.2 Instantaneous Failure or Hazard Rate 27
3.2.3. Reliability Function 27
3.3 Bathtub Hazard Rate Curve 28
3.4 Mean Time to Failure (MTTF) 29
3.5 Reliability Networks 29
3.5.1 Series Structure 30
3.5.2 Parallel Configuration 31
3.5.3 Standby Redundancy 33
3.5.4 *k*-out-of-*n* Configuration 34
3.5.5 Bridge Configuration 35
3.6 Reliability Evaluation Techniques 36
3.6.1 Binomial Theorem to Evaluate Network Reliability 36
3.6.2 State Space Approach (Markov Processes) 37
3.6.3 Network Reduction Technique 38
3.6.4 Decomposition Method 38
3.6.5 Minimal Cut Set Method 38
3.6.6 Delta-Star Technique 39
3.7 Failure Mode and Effect Analysis (FMEA) 43
3.8 Reliability Apportionment 43
3.8.1 Reliability/Cost Models 44
3.8.2 Similar Familiar Systems Reliability Apportionment Approach 44
3.8.3 Factors of Influence Method 45
3.8.4 Combined Familiar Systems and Factor of Influence Method 45
References 45

4 Fault Trees and Common Cause Failures 48

4.1 Introduction 48
4.2 Fault Tree Symbols and Definitions 48
4.3 General Procedure to Analyze Fault Trees 52
4.3.1 System Definition 53
4.3.2 Fault Tree Construction 53
4.3.3 Qualitative Fault Tree Evaluation 56
4.3.4 Quantitative Fault Tree Evaluation 57
4.4 Analytical Developments of Basic Gates 58
4.4.1 OR Gate 58
4.4.2 AND Gate 58
4.4.3 Priority AND Gate 59
4.5 A Fault Tree with Repeated Events 59
4.6 An Algorithm to Obtain Minimal Cut Sets 61
4.7 Fault Tree Duality 66
4.8 Probability Evaluation of a Fault Tree 66
4.8.1 OR Gate 67
4.8.2 AND Gate 67
4.8.3 Concluding Remarks 72
4.9 Failure Rate Evaluation of Fault Trees 72
4.9.1 OR Gate 73
4.9.2 AND Gate 73
4.10 Fault Tree Evaluation of Repairable Components 76
4.10.1 OR Gate 77
4.10.2 AND Gate 78
4.11 Lambda Tau Method 81
4.11.1 AND Gate 82
4.11.2 OR Gate 82
4.12 Repairable Component Fault Tree Evaluation with Kinetic Theory 85
4.13 Advantages and Disadvantages of the Fault Tree Technique 92
4.14 Common Cause Failures 93
4.14.1 Common Cause Failure Analysis of Reliability Networks 94
4.14.2 A Common Cause Failure Availability Model 104
4.14.3 A 1-out-of-*N*: *G* System with Duplex Elements 107

4.14.4 A 4-Unit Redundant Systems with Common Cause Failures 109
References 111

5 Software Reliability 118

5.1 Introduction 118
5.2 Hardware and Software 118
5.3 Software Reliability Models 119
5.3.1 Shooman Model 120
5.3.2 Markov Model 122
5.3.3 Jelinski-Moranda Model 123
5.3.4 Schick Wolverton Model 123
5.4 Model Validation 124
5.5 Software Reliability Assurance and Improvement 125
5.5.1 Designing for Reliability 125
5.5.2 Testing 128
References 129

6 Mechanical Reliability 131

6.1 Introduction 131
6.2 Statistical Distributions in Mechanical Reliability 132
6.2.1 The Exponential Distribution 132
6.2.2 The Extreme Value Distribution 133
6.2.3 The Weibull Distribution 133
6.2.4 The Mixed Weibull Distribution 134
6.2.5 The Gamma Distribution 134
62.6. The Log-Normal Distribution 135
6.2.7 The Fatigue Life Distribution Models 135
6.3 Fundamentals of Mechanical Reliability 136
6.4 Mechanical Equipment Basic Failure Modes 136
6.5 Theory of Failures 137
6.6 Safety Indices 139
6.6.1 Safety Factors 139
6.6.2 Safety Margin 140
6.7 Load Factors 141
6.7.1 Deterministic Resistance with Normally Distributed Loads 142

6.7.2 Normally Distributed Loads and Resistance 143
6.8 "Design by Reliability" Methodology 143
6.8.1 Determination of Failure Governing Stress Distribution 144
6.8.2 Determination of Failure Governing Strength Distribution 144
6.9 Reliability Determination—Constant Stress-Strength Interference Theory Models 145
6.9.1 Reliability Calculation by Graphical Approach 146
6.9.2 Analytical Constant Stress-Strength Interference Theory Models 148
6.9.3 Component Reliability Determination When Stress and Strength Follow Rayleigh Distribution 149
6.9.4 Component Reliability Calculation with Normally Distributed Stress and Gamma Distributed Strength 151
6.9.5 Component Reliability with Multiple Failure Modes 152
6.9.6 Chain Model 152
6.9.7 Stress-Strength Time-Dependent Models 153
6.10 Optimization of Mechanical Component Reliability 154
6.10.1 Reliability Optimization of a Mechanical Component with Normally Distributed Stress and Strength 154
6.11 Concluding Remarks 155
References 156

7 Human Reliability 161

7.1 Introduction 161
7.1.1 Human Reliability Definition 161
7.1.2 Human Error 161
7.2 Human Stress-Performance Effectiveness 162
7.3 Concept of Human Error 162
7.4 Types of Human Error 163
7.5 Causes of Human Error 164
7.6 Human Unreliability Data Banks 164
7.6.1 Experimentally Based Data Banks 165
7.6.2 Field-Based Data Banks 165
7.6.3 Subjective Data Banks 165
7.7 Human Reliability Modeling in Continuous Time Domain 166

7.7.1 Human Performance Reliability Function in Continuous Time Domain 166
7.7.2 Reliability Quantifiers for Time Continuous Human Performance Tasks 168
7.7.3 Experimental Justification of the Time Continuous Human Performance Model 168
7.7.4 Human Performance Effectiveness Function 169
7.8 Human Error Prediction Technique 170
7.8.1 Probability Tree Analysis 170
7.9 Human Reliability Analysis Applied to Nuclear Plants 172
References 172

8 Three-State Device Systems 177

8.1 Introduction 177
8.2 Literature Review 177
8.3 Reliability Analysis of Three-State Device Networks 178
8.3.1 Series Structure 178
8.3.2 Parallel Structure 181
8.3.3 Series-Parallel Network 181
8.3.4 Parallel-Series Structure 182
8.3.5 Bridge Network 182
8.4 Delta-Star Transformation Technique 183
8.4.1 Open-Failure Mode 183
8.4.2 Short-Failure Mode 186
8.5 Repairable Three-State Device Systems 190
8.5.1 Analysis of a Three-State System with Two Types of Components 190
8.5.2 A Repairable Three-State Device with Constant Failure and Repair Rates 193
8.5.3 A Mixed Markov Model with Two Three-State Devices 196
8.5.4 A Repairable Markov Model of Two Units in Series I 199
8.5.5 A Repairable Markov Model of Two Units in Series II 200
8.5.6 A Two-Failure-Mode System with Cold Standby Units 202

8.5.7 Availability Analysis of a Two-Failure-Mode System with Nonrepairable Standby Units 204
8.5.8 A *k*-out-of-*n* Three-State Device System with Common Cause Failures 207
8.5.9 A Four-unit Redundant System with Common Cause Failures 210
8.6 Reliability Optimization of Three-State Device Networks 212
8.6.1 Series Network 213
8.6.2 Parallel Network 213
References 213

9 Power System Reliability 216

9.1 Introduction 216
9.2 Generating Capacity Reliability 217
9.2.1 Generation System Model 217
9.2.2 Load and Generation Reserve 222
9.3 Assessment of Operating Reserve 232
9.3.1 Basic PJM Method 232
9.3.2 Modified PJM Method 233
9.3.3 Security Function Method 237
9.3.4 Frequency and Fractional Duration Method 237
9.4 Interconnected Systems 241
9.4.1 Independent Load Models 242
9.4.2 Correlated Load Models 245
9.4.3 System Studies 250
9.5 Transmission and Distribution Systems 252
9.5.1 Minimal Cut Set Method 253
9.5.2 The Markov Cut Set Method 255
References 262

10 Transit System Reliability 264

10.1 Introduction 264
10.2 Basic Theory 265
10.2.1 State Space Approach 266
10.2.2 Measures of Reliability 267

10.3 Vehicle System Model 270
10.3.1 Vehicle Model 271
10.3.2 Vehicle System Model 274
10.3.3 Reduced Vehicle System Model 276
10.3.4 Solution for State Probabilities and Reliability Measures 278
10.3.5 Vehicle System Example 280
10.4 System Model for Trains 285
10.5 Passenger Station Model 289
10.5.1 Model for a Single Station 289
10.5.2 Model for System of Stations 291
10.6 Models for Other Subsystems 295
10.6.1 Power Substation Model 295
10.6.2 Guideway Model 295
10.6.3 Command and Control System Model 296
10.7 Total System Model 296
10.7.1 System-Based Reliability Measures 296
10.7.2 Including Demand 297
10.8 System Studies 303
10.8.1 Sensitivity of Reliability Indices to the Vehicle MTBF (Retrieval Mode) 303
10.8.2 Sensitivity of Reliability Indices to the Mean Time to Repair a Vehicle 304
10.8.3 Effect of Spare Vehicles 306
10.8.4 Effect of Entraining Vehicles 308
10.9 Concluding Remarks 308
10.9.1 Effect of Peak and Off-Peak Periods 308
10.9.2 Simulation Versus Analytical Method 309
10.9.3 Failure Data 309
10.9.4 Further Work 310
References 310

11 Computer System Reliability Modeling 311

11.1 Introduction 311
11.2 Causes of Computer Failures 311
11.3 Classification of Faults 312

11.4 Basic Approaches to Computer Reliability 313
11.4.1 Static Redundancy 314
11.4.2 Dynamic Redundancy 314
11.4.3 Hybrid Redundancy 314
11.5 Modeling Permanent Faults 314
11.5.1 Simplex System 315
11.5.2 Triple-Modular Redundant System 315
11.5.3 NMR Configuration 322
11.5.4 Standby Redundancy 322
11.6 Modeling Transient Faults 325
References 327

Appendix: Three-State Device Networks 329

A.1 Series Structure 329
A.1.1 Reliability Expression 329
A.1.2 Probabilities of Failure 331
A.2 Parallel Structure 332
A.2.1 Reliability Expression 332
A.2.2 Failure Probabilities 333
