FIS GAS SENSOR **SB-15** for LP-GAS (PROPANE/BUTANE) DETECTION

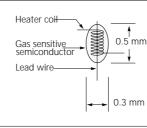

The SB-15 is a tin dioxide semiconductor gas sensor which has an excellent performance in propane/butane detection. The features are: high sensitivity, low sensitivity to noise gases, quick response speed, strong poisoning resistance and significant low power consumption design (120 mW).

Structure

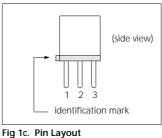

Gas sensitive semiconductor material is a mini bead type and a heater coil and electrode wire are embedded in the element. The sensing element is installed in the metal housing which uses double stainless steel mesh (100 mesh) in the path of gas flow. The mesh is an anti-explosion feature (Fig 1).

Operating conditions

Fig 2 shows the standard operating circuit for this model. The change of the sensor resistance (R_S) is obtained as the change of the output voltage across the fixed or variable resistor (R_L). In order to obtain the best performance and specified characteristics, the values of the heater voltage (V_H) circuit voltage (V_C) and load resistance (R_L) must be within the range of values given in the standard operating conditions shown in the specification table on the next page.

Sensitivity characteristics

Fig 3 shows the sensitivity characteristics curves of the SB-15 (typical data). Sensitivity characteristics of the FIS gas sensors are expressed by the relationship between the sensor resistance and gas concentration. The sensor resistance decreases with an increase of gas concentration based on a logarithmic function.

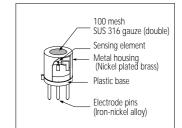

Fig 1b. Configuration

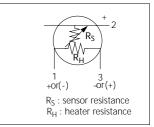

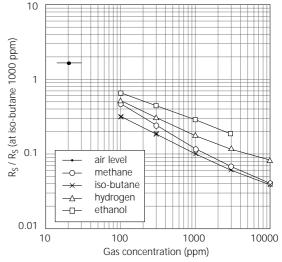

Fig 1d. Equivalent circuit

The sensitivity characteristics of the SB-15 is specified by the following parameters.

- Sensor resistance level: at iso-butane 1000 ppm
- Sensor resistance change ratio: between iso-butane 1000 ppm and 3000 ppm

See the specification table on the next page for further details.

R ≶ V_{RL} $V_{\rm C}$ \$M R_H V_{H} R_S: Sensor Resistance V_C : Circuit Voltage Standard operating conditions: V_H : Heater Voltage R_L : Load Resistance V_C : 5 V DC V_H⁻: 0.90 V DC R_H : Heater Resistance V_{RL:} Voltage across R_L : Variable (> 200 Ω) load resistance

SPECIFICAIONS

Fig 2. Standard circuit

A. Standard Operating conditions

Symbol	Parameter	Specification	Conditions etc.
V _H	Heater voltage	0.9 V ± 0.05V	AC or DC
V _C	Circuit voltage	Less than 5 V	DC (polarity is important)
RL	Load resistance	Variable (> 200 Ω)	P _S < 10 mW
R _H	Heater resistance	$2.8 \Omega \pm 0.2 \Omega$	at room temperature
I _H	Heater current	130 mA	I _H = V _H / R _H (typical value)
P _H	Heater power consumption	120 mW	$P_{H} = V_{H}^{2} / R_{H}$ (typical value)
P _S	Power dissipation of sensing element	Less than 10 mW	$P_{S} = \frac{(V_{C} - V_{RL})^{2}}{R_{S}}$

B. Environmental conditions

Symbol	Parameter	Specification	Conditions etc.
Тао	Operating temperature	-20°C to 50 °C	
Tas	Storage temp	-20 °C to 70 °C	Recommended range
RH	Relative humidity	Less than 95% RH	
(O ₂)	Oxygen concentration	21% ± 1% (Standard condition)	Absolute minimum level: more than 18%
		The sensitivity characteristics are influenced by the variation in oxygen concentration.	

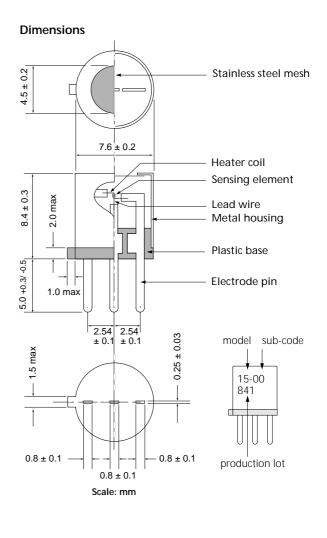

C. Sensitivity characteristics

Model	SB-15-00		
Symbol	Parameter	Specification	Conditions etc.
R _S	Sensor resistance	0.2 k Ω to 2.0 k Ω	at is-butane 1000 ppm
β	Sensitivity	0.55 to 0.75	Rs (at 3000 ppm) Rs (at 1000 ppm)
Standard Test Conditions:		Temp: $20 ^{\circ}\text{C} \pm 2 ^{\circ}\text{C}$ Humidity: $65\% \pm 5\%$ (in clean air)	$ \begin{array}{l} V_C: \ 5.0 \ V \pm 1\% \\ V_H: \ 0.9 \ V \pm 1\% \\ R_L: \ 750 \ \Omega \pm 5\% \end{array} $
Pre-heating time: more than 48 hours		ore than 48 hours	

D. Mechanical characteristics

Items	Conditions		Specifications
Vibration	Frequency: Vertical amplitude: Duration:	100 cpm 4 mm 1 hour	Should satisfy the specifications shown in the
Shock	Acceleration: Number of impacts:	100 G 5 times	sensitivity characteristics.

Please contact

E. Parts and Materials

No.	Parts	Materials
1	Sensing element	Tin dioxide (SnO ₂)
2	Lead wire	Platinum
3	Heater coil	Platinum
4	Plastic base	PBT (Poly butylene terephthalate)
5	Stainless steel mesh	SUS 316 (100 mesh, double)
6	Metal housing	Nickel plated brass
7	Electrode pins	Iron-nickel alloy
